Preface	ix	Structural features	33
About the author	x	Adhesion	34
Disclaimer	xi	Secreted proteins	36
Acknowledgements	xiii	Endotoxin	37
Abbreviations	xv	Superantigens	37
		Immune-mediated diseases	37
Chapter 1 Introduction to Clinical Microbiology	1	Chapter 3 Epidemiology and Assessment	41
Introduction	1	Introduction	41
Bacteria	1	Epidemiology	42
Cell wall	4	World-wide	42
Bacterial physiology	5	Regional	43
Synthesis of DNA, RNA and proteins	6	Local	46
Protein synthesis	8	The incubation period	47
Cytoplasmic membrane and some of its functions	8	The HIV test	47
Capsules	9	The steps in management of the patient	48
Sporulation	10	MEWS and the 'Sepsis Six'	48
Genetic exchange in bacteria	10	Which organisms and which antibiotics?	50
Viruses	11	Antibiotic treatment in the septic patient with an unknown source	51
The replication of viruses	14	Fever of unknown origin	51
Fungi	18	Infection control	53
Diseases caused by fungi	21	Public health	53
Parasites	21	Laboratory tests	53
The life cycle of malaria	21	Chapter 4 Anti-Infective Agents	61
The life cycle of <i>Schistosoma</i> <i>haematobium</i>	23	Introduction	61
Chapter 2 How Bacteria Cause Disease	25	Antibacterial agents	64
Introduction	25	The p-lactam antibiotics	64
Non-specific defences	26	Antibiotic resistance in bacteria	66
Active defences	27	The antifungals	70
The acute reaction to infection	30	Resistance to antifungals	71
Markers of the cytokine response	31	The antivirals	71
Acute phase proteins	31	Influenza virus	71
Complement	31	The herpesviruses	71
Pathogenic properties of bacteria	33		

Hepatitis B virus and hepatitis C virus	72	Basic processing of a specimen	96	Diagnosis and management	130	Examination of the specimen; the urine	
HIV	73	The time scale of events in the		Blood cultures	130	dipstick	168
Resistance to antiviral agents	74	laboratory	98	Infective endocarditis	134	The laboratory report	168
Antimalarial agents	74	How bacteria are identified	100	Infections of implantable cardiac		The catheterized patient	170
Artesunate	74	Speciation of bacteria and fungi	105	electronic devices	137	Sterile pyuria	170
4-aminoquinoline	74	Antibiotic susceptibility testing	107	Other ways of making the diagnosis	138	Relapsing UTI	170
8-aminoquinolines	74	The Virology laboratory (serology and		The identification of <i>Staphylococcus aureus</i>			
Tetracyclines	75	molecular testing)	109	in blood culture	138	Chapter 11 Infections of the	
The science of antibiotic use	75	Serological tests	109			Alimentary Canal	173
Minimum inhibitory concentration	75	Molecular tests	110	Chapter 8 Infections of the Respiratory Tract	141	introduction	173
Minimum bactericidal concentration	75	Nucleic acid sequencing	113	Introduction	141	Organisms	173
Antibiotic kinetics	76			Organisms	142	Pathogenesis	173
The distribution of antibiotics		Chapter 6 Infection Control	115	Pathogenesis	144	Dental infections	173
in the body	77	Introduction	115	Otitis media, mastoiditis and sinusitis	144	Infections of the upper alimentary	
Importance of estimating renal		Occupational health compliance	115	Pharyngitis	144	canal	176
function	77	Dress code and personal protective		Pneumonia	145	Infections of the lower alimentary	
Antibiotic assays	77	equipment	116	Lung abscess	146	canal	178
Antibiotic guidelines	78	Handwashing	117	Diagnosis and management	147	Diagnosis and management	183
Prudent antibiotic prescribing	78	The 5 moments of hand hygiene	117	Lung abscess	148	<i>Clostridium difficile</i>	185
Prophylactic antibiotics	82	The ward layout and environment	117	Infection from hospital water systems	148	Chapter 12 Infections of the Liver,	
The role of antibiotic prophylaxis	83	Negative-pressure ventilation single		<i>Legionella pneumophila</i>	148	Biliary Tract and Pancreas	III
The contamination classification of		rooms	118	<i>Pseudomonas aeruginosa</i>	149		
surgical procedures	84	The source of organisms and how they				Introduction	187
Which prophylactic antibiotic to use	84	are spread	118	Chapter 9 Tuberculosis	151	Organisms	188
Allergy to penicillins	85	Air-borne	118	Introduction	151	Pathogenesis	188
The nature of the immunological		Faecal-oral	120	Organisms	151	Via the hepatic artery to	
reaction to penicillin	85	Direct contact	121	Pathogenesis	151	the liver	188
The types of drug reactions to consider	85	Indirect contact	121	Diagnosis and management	157	Via the portal vein to the liver	188
Cross reaction between the p-lactams in		Blood-borne	121	Molecular testing	158	Via the biliary system from the	
the setting of the non-immediate		Water-borne	121	The histopathology specimen	158	duodenum	188
allergic reaction	86	Reusable surgical equipment	122	Treatment	159	Diagnosis and management	189
Obtaining the history	86	Venous access lines	122	Infection control	160	Hepatitis viruses	189
Public health issues	160	Screening for infection control 'alert'					
vaccination		organisms	123	Chapter 10 Infections of the Urinary Tract	163	HCV	192
HBV 191		Chapter 7 Infections of the Blood	125	Introduction	163	HEV	192
Active immunity	87	Introduction	125	Organisms	164	An outline of the treatment of chronic	
Passive immunity	87	Organisms	125	Pathogenesis	164	HBV and HCV infection	193
Vaccination of patients in 'at risk'		Pathogenesis	125	Uncomplicated and complicated UTI	166	HBV	193
groups	87	Infective endocarditis	127	Diagnosis and management	166	HCV	194
Chapter 5 The Microbiology Laboratory	91	Infections of implantable cardiac					
Introduction	91	electronic devices	129				
The laboratory	91						
Bacteriology laboratory tests	96						

Chapter 13 Infections of the Skin, Soft Tissues, Joints and Bone	195	<i>Chlamydia trachomatis</i>	226
Introduction	195	Pelvic inflammatory disease	229
Organisms	196	Vaginitis	229
Pathogenesis	198	Postpartum infections, septic abortions and gynaecological infections	230
Infections of the skin and soft tissue	198	Diagnosis and management	231
Fasciitis and myositis	198	The patient with a vaginal discharge where a STI is unlikely	231
Septic arthritis	198	Sexually transmitted diseases: gonorrhoea and chlamydia	231
Osteomyelitis	200	<i>Streptococcus pyogenes</i> in female and male genital infection	233
Diabetic foot infections	202	Pelvic inflammatory disease	234
Diagnosis and management	202	Infections in pregnancy, the fetus, newborn and neonate	235
Chapter 14 Infections of the Central Nervous System	205	The role of antenatal screening	235
Introduction	205	Other infections that pose a risk to the mother and fetus	237
Organisms	206	Chapter 17 Infections in a Modern Society	241
Pathogenesis	208	Introduction	241
Meningitis	208	The immunosuppressed patient	241
Brain abscess	209	The patient infected with HIV	241
Subdural and extradural infections	211	The haematology and oncology patient	243
Ventriculoperitoneal shunt and external ventricular drain infections	211	The solid organ transplant patient	244
Toxin-mediated diseases	213	The renal patient	244
Diagnosis and management	214	Haemodialysis	244
Laboratory diagnosis	214	Chronic ambulatory peritoneal dialysis peritonitis	245
Treatment	216	The injecting drug user	247
Chapter 15 Infections of the Eye	219	The intensive care unit patient	248
Introduction	219	The elderly patient	249
Organisms	219	The patient with an absent or dysfunctional spleen	250
Pathogenesis	220	Index	253
Diagnosis and management	222	Infection Control Scenarios (online)	
Treatment	222	MCQs (online)	
Chapter 16 Infections of the Genital Systems	225	MCQs with answers (online)	
Introduction	225		
Organisms	226		
Pathogenesis	226		
Gonorrhoea	226
