

CONTENTS

1

INTRODUCTION 1

- Introduction 2
- What is respiration? 2
- The need for respiration 2
- Diffusion and gas transport 3
- Timing in circulation and respiration 3
- Basic science of respiration 3
- Respiratory symbols—the language of the respiratory system 4
- Centimetre, gram, second and système international units 4
- Drugs 5
- Symptoms of respiratory disease 5

2

STRUCTURE AND FUNCTION OF THE RESPIRATORY SYSTEM 9

- Introduction 10
- Embryology 10
- Airways 10
- Mouth and nose 11
- Larynx 12
- Trachea 13
- Intrathoracic airways 13
- Histological structure of the airways 14
- Supporting tissues 16
- Pulmonary vasculature 18
- Lymphatics 19
- Nerves 19
- Mechanics of breathing 20
- Defences against the environment 21
- Conditioning air 21
- Inhaled particles 21
- Smoking and air pollution 23
- Metabolic activity 23
- Metabolism and production of biologically active substances 24
- Non-respiratory functions of the lung 24

3

ELASTIC PROPERTIES OF THE RESPIRATORY SYSTEM 29

- Introduction 30
- Compliance and elastance 30

4

AIRFLOW AND RESISTANCE IN THE RESPIRATORY SYSTEM 43

- Introduction 44
- Bringing about airflow 44
- Laminar and turbulent flow 45
- Factors affecting flow 45
- Respiratory system resistance 46
- Work of breathing 50
- Assessing and measuring resistance in the respiratory system 52
- Asthma 54
- Chronic obstructive pulmonary disease 57

5

PULMONARY VENTILATION 61

- Introduction 62
- Lung volumes, capacities and spirometry 62
- Spirometric abnormalities in disease 63

6

DIFFUSION OF GASES BETWEEN AIR AND BLOOD 77

- Introduction 78
- Diffusion and the significance of partial pressure 78
- Factors affecting the rate of diffusion 78
- Factors affecting diffusing capacity 79
- Measuring diffusing capacity 81
- The management of inadequate diffusion 82
- Carbon dioxide and other gases 83

7

THE PULMONARY CIRCULATION 85

- The bronchial circulation 86
- The pulmonary circulation 86
- The pulmonary circulation - structure and function 86
- Matching ventilation and perfusion 89
- Regional differences in ventilation in the lungs 92
- Ventilation/perfusion matching and its effect on blood oxygen and carbon dioxide content 93

CONTENTS

8

CARRIAGE OF GASES BY THE BLOOD AND ACID/BASE BALANCE 101

- Introduction - why do we need to transport gases in the blood? 102
- Oxygen transport 102
- Haemoglobin 103
- Why is haemoglobin kept in red cells? 107
- Haemoglobin variants 107
- Carbon dioxide transport 109
- Acid-base balance 111
- Calculation and illustration of acid-base status 115
- Clinical measurements 115

9

NERVOUS CONTROL OF BREATHING 121

- Introduction 122
- Central control of breathing 123
- Medullary respiratory centres 124
- Conscious control of breathing 125
- Pattern of breathing in chronic obstructive pulmonary disease 126
- Respiratory muscle innervation 127
- Neuromuscular disorders 128
- Afferent inputs to the respiratory centre 130
- Pulmonary afférents 130
- Upper airway afférents - the nose, pharynx, and larynx 132
- Musculoskeletal afférents 133

10

CHEMICAL CONTROL OF BREATHING 137

- Introduction 138
- Hypercapnia 138
- Central chemoreceptors 139
- Hypoxia 140
- Peripheral chemoreceptors 140
- Cheyne-Stokes breathing 142
- Long-term hypoxic stimulation 142
- Effects of anaesthesia on chemical control of breathing 143
- Asphyxia 143

11

LUNG FUNCTION TESTS 147

- Introduction 148
- Measuring lung volumes and capacities 148
- Measuring lung mechanics 150
- Measuring diffusing capacity 150
- Blood gas analysis 152
- Measuring oxygen levels 152
- Measuring the uniformity of ventilation and perfusion 152
- Multiple-breath washout curves 153
- Functional testing 154

Appendix: basic science 159

Glossary 165
